VIVITEC

Cybersecurity Overview

Comprehensive protection for small and mid-market businesses

THE CHALLENGE

Cyber threats are evolving faster than most businesses can respond. Small and mid-market organizations face the same sophisticated attacks as enterprises — ransomware, phishing, data breaches — but rarely have the in-house expertise or resources to defend effectively. The cost of a breach isn't just financial: it's operational disruption, lost client trust, and regulatory consequences.

Threat Monitoring

24/7 monitoring of your network, endpoints, and cloud environments. We detect anomalies, investigate alerts, and respond to threats before they become incidents.

Endpoint Protection

Next-generation antivirus and EDR deployed across all devices. Real-time threat detection, automated response, and centralized management keep your team secure wherever they work.

Vulnerability Management

Continuous scanning and assessment of your infrastructure. We identify weaknesses, prioritize remediation based on risk, and validate fixes — closing gaps before attackers find them.

Compliance Support

Navigate HIPAA, CMMC, PCI-DSS, and other frameworks with confidence. We map controls to your requirements, document evidence, and maintain audit-ready posture year-round.

> *"The right cybersecurity approach isn't about buying more tools — it's about having someone who knows how to use them, watching your environment, and acting decisively when it matters."*

PROACTIVE DEFENSE

- Security posture assessments
- Penetration testing
- Dark web monitoring
- Security awareness training

INCIDENT RESPONSE

- 24/7 SOC availability
- Breach containment & recovery
- Forensic analysis
- Post-incident reporting

ONGOING MANAGEMENT

- Patch management
- Firewall & policy tuning
- Quarterly risk reviews
- Executive reporting
