AI Evolution of Vivitec

AI Evolution of Vivitec

We're writing to share something important: how Vivitec is evolving to meet the AI-driven future your organization is already navigating. If you've been wondering where we stand on AI tools, adoption strategies, and practical implementation — this is that conversation.

Vivitec.AI: A New Practice for a New Era

We've spent the past year deep in the trenches with clients deploying Microsoft Copilot, building custom GPTs, and figuring out what AI actually means for daily operations. What we learned: AI isn't a separate initiative. It's woven into everything — security, productivity, data management, and infrastructure.

That's why we're launching **Vivitec.AI** as a dedicated practice within our company. Not a rebrand. Not a pivot. An expansion.

Vivitec.AI brings together our existing expertise in Microsoft 365, Azure, and enterprise IT with specialized focus on AI readiness, deployment, and optimization. This means when you work with us on Copilot adoption, you're not just getting configuration support — you're getting a team that understands data governance, compliance frameworks, change management, and the technical architecture that makes AI tools actually work.

We've already deployed AI solutions for organizations across healthcare, professional services, and manufacturing. The common thread: success comes from treating AI as a business capability, not a technology experiment. We help you get your data ready, train your team, configure the tools correctly, and measure what matters.

What This Means for You

If you're a current client, nothing changes about how we support your existing infrastructure. Your managed services continue. Your projects stay on track. What you gain is access to AI-specific expertise when you need it — whether that's a Copilot readiness assessment, custom AI workflow development, or strategic guidance on where AI fits in your roadmap.

If you've been hesitant about AI adoption because you're not sure where to start, we now have a structured path: assess your current state, identify high-impact use cases, prepare your environment, deploy with governance, and optimize based on real usage data. No hype. No pressure. Just a clear process that aligns with how your business operates.

What's Coming Up

- **AI Readiness Workshop** — May 2026. Hands-on session for leadership teams considering Copilot or custom AI tools. Limited to 8 organizations. Details coming soon.
 - **Case Study Release** — We're publishing a detailed look at a recent Copilot deployment, including before/after metrics, governance decisions, and lessons learned. Watch for it in your inbox next month.
 - **Webinar: Data Prep for AI** — June 2026. Free 45-minute session on why data quality matters more than ever when AI enters the picture, and what you can do about it now.
